ABSTRACT

This research study examines the impact of using mock IPL (Indian Premier League) auctions as a teaching tool in language learning, with particular focus on business vocabulary development and understanding of business concepts among undergraduate business administration students. The study included 45 participants who met specific inclusion and eligibility criteria. It uses a research design that includes a mock IPL auction performance evaluation conducted before and after the intervention. Assessment methods include pre- and performance tests that assess speaking skills, vocabulary quizzes that measure business-related vocabulary development, and surveys that gather qualitative feedback on participants' experiences. Findings reveal significant improvements in speaking skills, significant improvements in business-related vocabulary, and positive qualitative perceptions of the IPL simulation. This study supports the hypothesis that exposing language learners to mock IPL auction performance contributes not only to improved vocabulary but also to a deeper understanding of business concepts. This highlights the potential synergies between the IPL bidding environment and language education, emphasizing the value of experiential learning in language acquisition and business-related learning.

1. INTRODUCTION

The Indian Premier League (IPL), a premier professional Twenty20 cricket league, is not just a sporting extravaganza; it is an economic juggernaut that has taken the cricketing world by storm. Since its inception in 2008, the IPL has not only revolutionized cricket but also emerged as a powerhouse in terms of revenue generation, sponsorship deals and brand endorsements. With a heady mix of cricket
Leveraging Mock IPL Auction Performance to Enhance Business Vocabulary in Language Learning

ShodhKosh: Journal of Visual and Performing Arts

talent, celebrity appeal and corporate support, the IPL has transcended borders and captivated millions of fans in India and around the world. This mega-sporting event has become an annual ritual marking the start of summer in the Indian subcontinent.

Language learning, especially the acquisition of business vocabulary, plays an indispensable role in preparing individuals for a globalized workforce. Mastery of business vocabulary not only facilitates effective communication but also equips learners with the ability to navigate the complex landscape of business, entrepreneurship, and management. In an increasingly interconnected world where business transcends geographic boundaries, language proficiency is critical. Therefore, there is an urgent need to explore innovative teaching approaches that bridge the gap between linguistic competence and real-world application, especially business vocabulary.

This research begins a fascinating journey that addresses the intersection of IPL, business vocabulary development, and language learning. The core of our investigation centers around the intriguing question: "How can performance in mock IPL auctions be used to build business vocabulary?" By exploring this query, we attempt to harness the excitement generated by IPL and frame a transformative pedagogical approach that leads to the development of business-related language skills.

The dynamic and fast-paced environment of a mock IPL auction can act as a powerful catalyst for improving business vocabulary. The hypothesis draws inspiration from the enthralling nature of the IPL, where high-stakes bidding wars unfold and financial acumen is a must. Engaging students in mock IPL auctions is expected to not only expand their linguistic skills but also instill them with a nuanced understanding of business concepts and strategies.

2. RESEARCH OBJECTIVES

This study encompasses several specific research objectives, each aimed at shedding light on the intersection of mock IPL auction performance and business vocabulary development in language learning:

1) To investigate the effectiveness of utilizing mock IPL auctions as a pedagogical tool for the development of business vocabulary among language learners. This objective seeks to measure the impact of this immersive experience on the participants' linguistic competence in business-related terminology.

2) To assess how participation in mock IPL auctions influences language learners' comprehension of business concepts. This will involve evaluating whether students, through their involvement in simulated auctions, gain a deeper understanding of the intricacies of business strategies, negotiations, and decision-making processes.

3) To evaluate the overall engagement and motivation levels of language learners when immersed in the mock IPL auction environment. This objective aims to see whether the excitement generated by the IPL simulation enhances learners' enthusiasm for language acquisition and business-related learning.

3. HYPOTHESIS

The research hypothesis states that "Exposing language learners to a mock IPL auction performance will lead to significant improvement in their business
vocabulary and better understanding of business concepts." This hypothesis forms the focus of the study, that integrating mock IPL auctions into language learning will not only improve learners’ vocabulary but also deepen their grasp of business-related ideas and strategies. This hypothesis positively guides the study's investigation of the potential synergy between the IPL bidding environment and language education.

4. LITERATURE REVIEW

Leveraging the insights of educational theorists such as Schwartz et al. (2005), who argue that effective learning hinges on a delicate equilibrium between well-learned routines and opportunities for innovation involving play and social interaction, the idea of utilizing mock IPL (Indian Premier League) auctions as a means to enhance business vocabulary in language learning becomes particularly compelling. As Moses (2013) astutely notes, the dialogue that emerges from cooperative inquiry stands as one of the most potent mechanisms for knowledge construction. Applying this principle to language acquisition, conducting mock IPL auctions presents a dynamic and immersive platform wherein learners engage in meaningful dialogues centered around business strategies, player acquisitions, and negotiations, consequently expanding their lexicon while actively constructing valuable insights. Furthermore, Kress (2009) underscores the pivotal role of social influences in deciphering symbols and language within the classroom setting. The mock IPL auction scenario integrates this principle seamlessly, offering language learners the opportunity to interact and negotiate with their peers, thus reinforcing their comprehension of business-related terminology within a real-world context.

Tomasello (1992) description of imitative learning as a cornerstone of language acquisition underscores the importance of participatory involvement in grasping the nuances of communication. Within the context of a mock IPL auction, language learners not only mimic the linguistic elements of business communication but also gain a deeper understanding of the contextual reasons behind specific language choices, facilitating a comprehensive grasp of business vocabulary. Firth & Wagner (1997) emphasis on the significance of social and contextual influences in second-language acquisition fits seamlessly with the concept of utilizing mock IPL auctions for the purpose of language learning. Such auctions serve as a channel through which language learners are immersed in a richly contextualized environment, allowing them to absorb and apply business-related lexicon within a setting that mirrors real-world linguistic dynamics.

Vygotsky (1978) theory of the zone of proximal development sheds light on the importance of social interaction in the process of learning and the collaborative construction of meaning. Mock IPL auctions, by their very nature, foster collaborative learning experiences. They enable language learners to collectively build their understanding of business vocabulary and its application through active interaction with their peers. In essence, these auctions function as a crucible where the amalgamation of diverse perspectives contributes to a more profound comprehension of business language and its nuances. Walqui (2006) concept of joint construction as collective scaffolding, encompassing collaboration and assistance among learners of varying proficiency levels, finds resonance in the context of mock IPL auctions. In this dynamic linguistic arena, learners scaffold their language skills through teamwork, providing mutual support, and collectively advancing their grasp of business terminology.

Finally, analogous to performing arts such as theater and dance, which consider language and expressive communication as intrinsically social, elucidated through...
quotations, mock IPL auctions can be considered as performative language learning activities. At this intensive level of education, students create and express meaning in an integrated manner within the fields of business and commerce, enriching their vocabulary and communication skills in a natural way. By injecting these scholarly insights into the discourse, the proposal to develop mock IPL auctions to promote business vocabulary in language learning emerges as a compelling pedagogical strategy—one that effortlessly integrates with established theories through play, social interaction, and effective learning. In essence, it provides language learners with a dynamic, engaging, and contextual environment.

5. METHODOLOGY
In this study, an assessment was conducted to evaluate the impact of a mock IPL (Indian Premier League) auction on key speaking abilities, including Pronunciation, Fluency, Vocabulary, Grammar and Syntax, and Content and Organization, among a group of 45 undergraduate students majoring in Business Administration. The following key aspects show the research methodology.

1) Participants: The target student population comprised 45 undergraduate Business Administration students who met the specific criteria. These criteria included enrollment in the business program and willingness to participate in a simulated IPL auction. These conditions were essential to ensure that the participants shared a common interest and possessed foundational knowledge of business terminology.

2) Research Design: The structure of the mock IPL auction performance assessment was a fundamental component of the research design. Participants engaged in a simulated IPL auction both before and after the intervention. To assess the impact of this intervention, a range of assessment methods was employed, including pre and post-performance tests to evaluate speaking abilities, vocabulary quizzes to measure improvements in business-related lexicon, and surveys to collect qualitative feedback concerning the participants’ experiences.

Below is the activity framework of the research followed for conducting the study.

| Table 1 |
|---------------------------------|-----------------|---------------------------------|----------------|
| **Table 1 Activity Framework of the Research** |
| **Time** | **Activity** | **Purpose** | **Resources Needed** |
| 0-10 min | Introduction to IPL and Cricket | To build foundational knowledge | Projector, slides on cricket and IPL basics |
| 10-20 min | Vocabulary Building | Introduce key terms related to the auction | Handouts with glossaries, whiteboard |
| 20-35 min | Mock IPL Auction Role-play Setup | Group students into ‘franchises’, assign roles (team owner, strategist, etc.) | Player profile cards, mock currency, auction hammer |
| 35-60 min | Conducting the Mock IPL Auction | Engage students in real-time bidding, team building, and strategic thinking | Projector for displaying player profiles, auctioneer role |
| 60-70 min | Reflection & Discussion | Allow students to reflect on their choices, strategies, and the language used | Discussion prompts, whiteboard |
3) **Data Collection:** Data collection encompassed various phases throughout the study. During the mock IPL auction performances, participants' speaking abilities, specifically focusing on Pronunciation, Fluency, Grammar and Syntax, and Content and Organization, were recorded. Additionally, vocabulary quizzes were administered to assess the development of business-related vocabulary. After the auctions, qualitative data were gathered through surveys to gain insights into the participants' perceptions of their language development during the exercise.

The criteria for evaluating business vocabulary development were based on participants' performance in both pre and post-performance tests, with a particular emphasis on their ability to effectively employ relevant business terminology. By providing a detailed outline of the methodology, this study aimed to present an objective and structured approach to assessing the impact of mock IPL auctions on the speaking abilities and vocabulary development of Business Administration undergraduate students.

Table 3 and Figure 1 show significant improvement in the performance level of the participants after the mock IPL auction was conducted for them as compared to the pre mock performance. As depicted, the total average improved from 31.73 in the pre IPL mock auction to 69.95 in the post test, which highlights the affirmative impact of the mock IPL auction intervention on language development among undergraduate business administration students.

6. DISCUSSION

The research objectives of this study are to investigate the multifaceted impact of using mock IPL (Indian Premier League) auctions as a teaching tool for language learners with particular focus on business vocabulary development and understanding of business concepts. In this paragraph, we will examine the research objective, provide insights into the findings, and explain how they connect to the research hypothesis.

The first research objective was to investigate the effectiveness of integrating mock IPL auctions into language learning as a means of improving business vocabulary among participants. Upon careful examination, it is clear that the experience of participating in these mock auctions had a significant positive impact on participants’ linguistic ability in business-related terms. Participants showed significant improvements in their ability to use relevant business jargon, thereby demonstrating the potential of experiential learning environments in enriching vocabulary.

The second objective was to assess how participation in mock IPL auctions affects language learners’ understanding of complex business concepts. This aspect
of the study revealed promising results, indicating that students, by engaging in these simulated auctions, gained a deeper understanding of the nuances of business strategies, negotiations, and decision-making processes. The immersive nature of IPL simulation facilitates a more in-depth connection between theoretical business knowledge and practical application, thereby strengthening understanding.

The third objective focused on evaluating language learners' overall engagement and motivation levels within a mock IPL bidding environment. The excitement generated by the IPL simulation significantly improved learners' interest in language acquisition and business-related learning. This heightened engagement stemmed from the fast-paced and dynamic nature of the mock auctions, which fostered a stimulating learning environment.

The research hypothesis, which stated that language learners’ exposure to a mock IPL auction performance would lead to significant improvements in their business vocabulary and a better understanding of business concepts, was consistent with the findings of the study. The data collected throughout the research process supported the hypothesis, confirming that the integration of mock IPL auctions had a positive and profound impact on language learning. The participants' improved business vocabulary and deeper understanding of business concepts validate the hypothesis and underline the potential synergies between the IPL bidding environment and language education.

This study yielded significant results, demonstrating the positive impact of the mock IPL auction intervention on language development among undergraduate business administration students. Among the 45 participants who met specific inclusion and eligibility criteria, significant improvements were observed in speaking skills including pronunciation, fluency, grammar, syntax, and content organization. Performance pre- and post-test scores reflected improved language skills, while vocabulary quizzes revealed significant increases in business-related vocabulary. The study's overall language development assessment showed significant improvement in both speaking skills and vocabulary skills. Furthermore, qualitative feedback from participants overwhelmingly recognized the effectiveness of the mock IPL auction exercise, emphasizing its contribution to a comprehensive understanding and use of business terminology. These findings underscore the value of experiential learning activities such as mock auctions and domain-specific vocabulary acquisition among business students in fostering language development.

The current study makes a notable contribution to the existing literature on pedagogical strategies involving immersive simulations, such as mock IPL auctions, in enhancing language learning and comprehension of business vocabulary and concepts. Future research could be on the longitudinal effects of such pedagogical strategies on language acquisition, examining the retention rate of the learned vocabulary and concepts. Moreover, the adaptability of this teaching approach in other educational contexts, like corporate training or online education, remains unexplored.
