Abstract

Aegle marmelos family rutaceae is an alleged ayurvedic medicinal tree commonly known as the bael. It is a medium sized tree growing throughout the forest of India of altitude 1200 meter. It is found all over India, from sub-Himalayan forest, Bengal, central and south India. It is considered to be a holy tree in India. Various parts of this plant such as leaves, roots, bark and fruit, possess anti-microfilarial, antifungal, immunomodulatory, anti-proliferative, wound healing, antifungal, analgesic, anti-inflammatory, antipyretic, hypoglycaemic, antidyslipidemic, anti-fertility, and insecticidal activity. Various phytopharmacological evaluations have been reported in this writing for the important potential of the Aegle marmelos.

Keywords: Aegle Marmelos; Leaves; Fruit; Bark; Pharmacological Properties.

1. Introduction

1.1. Plant Description

Bael (Aegle Marmelos (Linn)), family Rutaceae, is also known as Bale fruit tree, is a moderate sized, slender, aromatic tree, 6.0 - 7.5 m in height, and 90 to 120 cm in girth, with a somewhat fluted bole of 3.0-4.5 meter growing wild throughout the deciduous forests of India, ascending to an altitude of 1200 meter in the western Himalayas and also occurring in Andaman island.[1] This is generally considered as sacred tree by the Hindus, as its leaves are offered to Lord Shiva during worship. According to Hindu mythology, the tree is another form of Lord Kailashnath.[2] Leaves, fruit, stem and roots of this tree at all stages of maturity are used as ethno medicine against various human ailments.

1.2. Chemical Constituents

Various phytocomstituents have been isolated from the various parts of Aegle marmelos, which may be categorized as; [3]
Table 1: Phytoconstituents isolated from various parts of Aegle marmelos

2. Traditional Uses of Bael Tree Parts for Medicinal Purpose

The different parts of Bael are used for various therapeutic purposes, such as for treatment of Asthma, Anaemia, Fractures, Healing of Wounds, Swollen Joints, High Blood Pressure, Jaundice, Diarrhoea Healthy Mind and Brain Typhoid Troubles during Pregnancy. [4] Aegle marmelos has been used as a herbal medicine for the management of diabetes mellitus in Ayurvedic, Unani and Siddha systems of medicine in India [5], Bangladesh [6] and Sri Lanka.[7] Flowers are useful in diarrhea, excessive thirst, vomiting and eye disorders and it is advisable as diet in eruptive boils.[8]

3. Various proved therapeutic values of Aegle marmelos:

1) Wound Healing Activity: Effect of topical and intraperitoneal administration of methanolic extract of Aegle marmelos ointment and injection was studied respectively on two types of wound models in rats, the excision and the incision wound model. Both the injection and the ointment of the methanolic extract of Aegle marmelos produced a significant response in both of the wound type tested. In the excision model the extract treated wounds were found to epithelialize faster and the rate of wound contraction was higher, as compared to control wounds. The extract facilitated the healing process as evidenced by increase in the tensile strength in the incision model. The results were also comparable to those of a standard drug nitrofurazone.[9]

2) Analgesic: The methanol extract of leaves of Aegle marmelos at a dose level of 200 and 300 mg/kg showed significant analgesic activity on acetic acid-induced writhing and tail flick test in mice.10

3) Anti-Diabetic Activity: Aqueous extract of Aegle marmelos leaves, was evaluated for hypoglycemic and antioxidant effect by Upadhya S et al (2004), by using alloxon induced diabetes in male albino rats and proposed AML may be useful in the long-term management of diabetes.[11] Similarly, The anti hyperlipidaemic activity of aqueous extract of Aegle marmelos fruits was demonstrated by P.S. Marinzone et al (2005), using the streptozotocine induced diabetic wistar rats.[12] Sunderam et al, (2009) worked on alcoholic extract of Aegle Marmelos, Momordica Charantia and Eugenia Jambolana separately; against Streptozotocine induced diabetic rats and confirmed their protective activity against laboratory induced cell necrosis, [13] Where as, Kuttan & Sabu (2004) studied on leaf extract of Aegle Marmelos on Alloxane induced diabetes and reported that used extract was enough capable to reduce oxidative stress by scavenging lipid peroxidation and enhancing certain Anti-oxidant levels which causes lowering of elevated blood glucose level.[14] Beside of all above cited work, Hema & Lalithakumari (1999) had presented a tremendous results of Aegle Marmelos and documented its hypoglycemic action along with other pharmacological actions on molecular level.[15]
4) **Hepatoprotective Activity:** Singanan et al, (2007) worked on Aegle Marmelos leaf extract on alcohol induced liver injury in albino rats and presented data of excellent hepatoprotective effects. [16] Similarly, Ramnik S (2008), also demonstrated that aqueous extract of bael fruit pulp and seeds are effective in the treatment and prevention of CCI4 induced hepatic toxicity. [17]

5) **Antimicrobial Activity:** Maheshwari et al, (2009) studied on ethnolic extract of dried fruit pulp of Aegle Marmelos against various intestinal pathogens i.e. Shigella boydii, S. sonnei & S. Flexneri and proposed that certain phytochemicals including Phenols, Tannins and Flavonoids were effective against all. [18] It was also confirmed by Kaur et al, (2009) by getting treat E. Coli with Aegle Marmelos fruit extract. [19] In consonance, Citarasu et al, (2003) also experimented Aegle Marmelos on certain pathogenic bacteria like Salmonella typhi, Pseudomonas aeruginosa, Aeromonas hydrophyla & Vibrio sp., and concluded its positive bactericidal effects. [20]

### 4. Conclusion

Numerous pharmacological studies have been conducted on different parts of Aegle marmelos. The present literature supports the potential of Aegle marmelos as a medicinal tree. It is quite evident from this review that Aegle marmelos contains a number of phytoconstituents which reveals its uses for various therapeutic purposes. The Plant or its individual parts can be used for the treatment of various disorders in human being such as, diabetes, liver toxicity, fungal infection, microbial infection, inflammation, pyrexia and to relieve pain. Still, more research can be done to investigate the unexplored and unexploited potential of this plant and to investigate the mechanism of actions with other therapeutic activities.
