Abstract

Before there was an art of abstract painting, it was already widely believed that the value of a picture was a matter of colors and shapes alone. Music and architecture were constantly held up to painters as examples of a pure art which did not have to imitate objects but derived its effects from elements peculiar to itself. But such ideas could not be readily accepted, since no one had yet seen a painting made up of colors and shapes, representing nothing. If pictures of the objects around us were often judged according to qualities of form alone, it was obvious that in doing so one was distorting or reducing the pictures; you could not arrive at these paintings simply by manipulating forms. And in so far as the objects to which these forms belonged were often particular individuals and places, real or mythical figures, bearing the evident marks of a time, the pretension that art was above history through the creative energy or personality of the artist was not entirely clear. In abstract art, however, the pretended autonomy and absoluteness of the aesthetic emerged in a concrete form. Here, finally, was an art of painting in which only aesthetic elements seem to be present.

Keywords: Trends; Contemporary; Paintings.

1. Introduction

Abstract art had therefore the value of a practical demonstration. In these new paintings the very processes of designing and inventing seemed to have been brought on to the canvas; the pure form once masked by an extraneous content was liberated and could now be directly perceived. Painters who do not practice this art have welcomed it on just this ground, that it strengthened their conviction of the absoluteness of the aesthetic and provided them a discipline in pure design. Their attitude toward past art was also completely changed. The new styles accustomed painters to the vision of colors and shapes as disengaged from objects and created an immense confraternity of works of art, cutting across the barriers of time and place. They made it possible to enjoy the remotest arts, those in which the represented objects were no longer intelligible, even the drawings of children and madmen, and especially primitive arts with drastically distorted figures, which had been regarded as artless curios even by insist-ently aesthetic critics. Before this time Ruskin could
say in his *Political Economy of Art*, in calling for the preservation of medieval and Renaissance works that “in Europe alone, pure and precious ancient art exists, for there is none in America, none in Asia, none in Africa.” What was once considered mon-strous, now became pure form and pure expression, the aesthetic evidence that in art feeling and thought are prior to the represented world. The art of the whole world was now available on a single unhistorical and universal plane as a panorama of the formalizing energies of man.

These two aspects of abstract painting, the exclusion of natural forms and the unhistorical universalizing of the qualities of art, have a crucial importance for the general theory of art. Just as the discovery of non-Euclidian geometry gave a powerful impetus to the view that mathematics was independent of experience, so abstract painting cut at the roots of the classic ideas of artistic imitation. The analogy of mathematics was in fact present to the minds of the apologists of abstract art; they have often referred to non-Euclidian geometry in defense of their own position, and have even suggested an historical connection between them.

Today the abstractionists and their Surrealist offspring are more and more concerned with objects and the older claims of abstract art have lost the original force of insurgent convictions. Painters who had once upheld this art as the logical goal of the entire history of forms have refuted themselves in returning to the impure natural forms. The demands for liberty in art are no longer directed against a fettering tradition of nature; the aesthetic of abstraction has itself become a brake on new movements. Not that abstract art is dead, as its philistine enemies have been announcing for over twenty years; it is still practiced by some of the finest painters and sculptors in Europe, whose work shows a freshness and assurance that are lacking in the newest realistic art. The conception of a possible field of “pure art”—whatever its value—will not die so soon, though it may take on forms different from those of the last thirty years; and very likely the art that follows in the countries which have known abstraction will be affected by it. The ideas underlying abstract art have penetrated deeply into all artistic theory, even of their original opponents; the language of absolutes and pure sources of art, whether of feeling, reason, intuition or the sub-conscious mind, appears in the very schools which renounce abstraction. “Objective” painters strive for “pure objectivity,” for the object given in its “essence” and completeness, without respect to a viewpoint, and the Surrealists derive their images from pure thought, freed from the perversions of reason and everyday experience. Very little is written today—sympathetic to modern art—which does not employ this language of absolutes.

In this article I shall take as my point of departure Barr’s recent book, the best, I think, that we have in English on the movements now grouped as abstract art. It has the special interest of combining a discussion of general questions about the nature of this art, its aesthetic theories, its causes, and even the relation to political movements, with a detailed, matter-of-fact account of the different styles. But although Barr sets out to describe rather than to defend or to criticize abstract art, he seems to accept its theories on their face value in his historical exposition and in certain random judgments. In places he speaks of this art as independent of historical conditions, as realizing the underlying order of nature and as an art of pure form without content.

Hence if the book is largely an account of historical movements, Barr’s conception of abstract art remains essentially unhistorical. He gives us, it is true, the dates of every stage in the various movements, as if to enable us to plot a curve, or to follow the emergence of the art year by year,
but no connection is drawn between the art and the conditions of the moment. He excludes as irrelevant to its history the nature of the society in which it arose, except as an incidental obstructing or accelerating atmospheric factor. The history of modern art is presented as an internal, immanent process among the artists; abstract art arises because, as the author says, representational art had been exhausted. Out of boredom with “painting facts,” the artists turned to abstract art as a pure aesthetic activity. “By a common and powerful impulse they were driven to abandon the imitation of natural appearance” just as the artists of the fifteenth century “were moved by a passion for imitating nature.” The modern change, however, was “the logical and inevitable conclusion toward which art was moving.

This explanation, which is common in the studios and is defended by some writers in the name of the autonomy of art, is only one instance of a wider view that embraces every field of culture and even economy and politics. At its ordinary level the theory of exhaustion and reaction reduces history to the pattern of popular ideas on changes in fashion. People grow tired of one color and choose an opposite; one season the skirts are long, and then by reaction they are short. In the same way the present return to objects in painting is explained as the result of the exhaustion of abstract art. All the possibilities of the latter having been explored by Picasso and Mondrian, there is little left for the younger artists but to take up the painting of objects.

The notion that each new style is due to a reaction against a preceding is especially plausible to modern artists, whose work is so often a response to another work, who consider their art a free projection of an irreducible personal feeling, but must form their style in competition against others, with the obsessing sense of the originality of their work as a mark of its sincerity. Besides, the creators of new forms in the last century had almost always to fight against those who practiced the old; and several of the historical styles were formed in conscious opposition to another manner-Renaissance against Gothic, Baroque against Mannerism, Neo-classic against Rococo, etc.

The antithetic form of a change does not permit us, however, to judge a new art as a sheer reaction or as the inevitable response to the spending of all the resources of the old. No more than the succession of war and peace implies that war is due to an inherent reaction against peace and peace to a reaction against war. The energies required for the reaction, which sometimes has a drastic and invigorating effect on art, are lost sight of in such an account; it is impossible to explain by it the particular direction and force of the new movement, its specific moment, region and goals. The theory of immanent exhaustion and reaction is inadequate not only because it reduces human activity to a simple mechanical movement, like a bouncing ball, but because in neglecting the sources of energy and the condition of the field, it does not even do justice to its own limited mechanical conception. The oppositeness of a reaction is often an artificial matter, more evident in the polemics between schools or in the schemas of formalistic historians than in the actual historical change. To supply a motor force to this physical history of styles (which pretends to be anti mechanical), they are reduced to a myth of the perpetual alternating motion of generations, each reacting against its parents and therefore repeating the motions of its grandparents, according to the “grandfather principle” of certain German historians of art. And a final goal, an unexplained but inevitable trend, a destiny rooted in the race or the spirit of the culture or the inherent nature of the art, has to be smuggled in to explain the large unity of a development that embraces so many reacting generations. The immanent purpose steers the reaction when an art seems to veer off the main path because of an overweighted or foreign element. Yet how many arts we know in which
the extreme of some quality persists for centuries without provoking the corrective reaction. The “decay” of classical art has been attributed by the English critic, Fry, to its excessive cult of the human body, but this “decay” evidently lasted for hundreds of years until the moment was ripe for the Christian reaction. But even this Christian art, according to the same writer, was for two centuries indistinguishable from the pagan.

2. History

The historical fact is that the reaction against Impressionism came in the 1800s before some of its most original possibilities had been realized. The painting of series of chromatic variations of a single motif (the Haystacks, the Cathedral) dates from the 1890’s; and the Water Lilies, with their remarkable spatial forms, related in some ways to contemporary abstract art, belong to the twentieth century. The effective reaction against Impressionism took place only at a certain moment in its history and chiefly in France, though Impressionism was fairly widespread in Europe by the end of the century. In the 1880s when Impressionism was beginning to be accepted officially, there were already several groups of young artists in France to whom it was un congenial. The history of art is not, however, a history of single willful reactions, every new artist taking a stand opposite the last, painting brightly if the other painted dully, flattening if the other modelled, and distorting if the other was literal. The reactions were deeply motivated in the experience of the artists, in a changing world with which they had to come to terms and which shaped their practice and ideas in specific ways.

The tragic lives of Gauguin and Van Gogh, their estrangement from society, which so profoundly colored their art, were no automatic reactions to Impressionism or the consequences of Peruvian or Northern blood. In Gauguin’s circle were other artists who had abandoned a bourgeois career in their maturity or who had attempted suicide. For a young man of the middle class to wish to live by art mean a different thing in 1885 than in 1860. By 1885 only artists had freedom and integrity, but often they had nothing else. The very existence of Impression-ism which transformed nature into a private, unformalized field for sensitive vision, shifting with the spectator, made painting an ideal domain of freedom; it attracted many who were tied unhappily to middle class jobs and moral standards, now increasingly problematic and stultifying with the advance of monopoly capitalism. But Impressionism in isolating the sensibility as a more or less personal, but dispassionate and still outwardly directed, organ of fugitive distinctions in distant dissolving clouds, water and sunlight, could no longer suffice for men who had staked everything on impulse and whose resolution to become artists was a poignant and in some ways demoralizing break with good society. With an almost moral fervour they transformed Impressionism into an art of vehement expression, of emphatic, brilliant, magnified, obsessing objects, or adjusted its coloring and surface pattern to dreams of a season-less exotic world of idyllic freedom.

3. Literature Review

The Russian painter Malevich, the founder of “Suprematism,” has described his new art in revealing terms. “By Suprematism I mean the supremacy of pure feeling or sensation in the pictorial arts … In the year 1913 in my desperate struggle to free art from the ballast of
the objective world I fled to the form of the Square and exhibited a picture which was nothing more or less than a black square upon a white ground … It was no empty square which I had exhibited but rather the experience of objectlessness” (Barr, pp. 122-23).

Kolte has discovered for us one such new visual language through his paintings. In addition, interpretation of such signs, this innovative cartography, so to speak, is difficult to communicate through world. This can be felt only by viewing his works in person. The paintings of Prabhakar Kolte are so subtly energized that I felt, he must have gone through many tests and experiments of maturity, concentration and rationality, with abandon.

S.H.Raza was a popular painter of impressionistic landscapes before a rendezvous with abstraction changed his direction forever. Influenced by mark Rothoko, whose gestural abstraction he adopted almost like a mantra, Razas switchover was as dramatic as it was bold working in impasto he began to create abstract landscapes that resonated with his memories and colour of India in particular, he
was drawn to the Basohli miniatures and their borders his abstract paintings were divided in to fragmentary fields that contained the narrative dialogue of the miniature school ever though the abstract composition was devoid of any narration later still, another twist would lead to changing his stance yet again this time steeped in the symbolism of tantric art by way of geometric abstractions of which he has been a master for over three decades.

As per Peter Halley (Artist), I really have come to the conclusion that what make painting pleasurable- how we read it’s the one visual art experience that combine an image and a reading of texture at the same time, I think what a great painting is a painting that we both read haptically, texturally that we get pleasure out of our material reading of it, like a van Gogh and we also equally enjoy the image.
4. Conclusion

All contemporary movements and styles are derived from the concept of abstract. It has been considered in expressions. Modernism in abstract art can be traced to the desire of artists for an objective impression of their creation. The inner meaning of abstract art can be of great enlightenment for the emerging artists, only proper awareness and study needs to be undertaken in this direction to appreciate the essence of abstract art.
